VisionAI™

Real-time visual intelligence for operations where quality and safety can't slip.

From defect detection to foam control and aseptic monitoring, VisionAI™ empowers teams with clarity, compliance, and confidence, at the speed modern industry demands.

Why VisionAI?

- Catch defects before they become product quality issues

- Protect sterile environments with confidence

- Prevent foam or other reaction issues that waste time and product

- Automate compliance, with visual verification, cutting rework

- Scale oversight from single application to comprehensive coverage throughout the facility

Results:
Better quality, less waste, and measurable ROI through real world adaptation

Connecting You to What's Next™

LINQUE

INDUSTRIAL INTELLIGENCE

VisionAI™

Built for Your Biggest Challenges

VisionAI delivers in mission-critical areas:

Visual Inspection

- Improves first-pass yield
- Speeds inspections compared to manual checks
- Trusted across high-precision industries

Foam Detection

- Real-time foam and liquid level tracking
- Flexible camera and system integration
- Proven in biologics manufacturing and beyond

Aseptic Monitoring

- Precise real-time sterility monitoring
- Privacy-first, offline capable
- Trusted for sterile environments

HOW IT WORKS

Seamless by Design

VisionAI™ deploys at the edge for instant processing, integrates across technology environments, and provides intuitive oversight that scales with your operations.

Real-Time AI Vision
Edge algorithms process images instantly, no internet required.

Flexible Deployment
Works in cleanrooms, bioreactors, packaging lines, or transport hubs.

Actionable Oversight
Dashboards, overlays, and continuous logs drive long-term optimization.
